

Someone in my household tested positive for COVID-19. What do I do?

If you are able to isolate away from the positive household member:

- Because the positive case is in your household, there is a higher risk of COVID-19 transmission than for a regular close contact, even with the positive case isolating away from you. **As a result, you will need to have a negative test result before returning to work, school or childcare. You can do this test as soon as you are able.**
- You will also follow the detailed testing and self-isolation instructions for close contacts found in this resource: nshealth.ca/information-covid-19-close-contacts

Continue to monitor for symptoms of COVID-19. If symptoms develop, isolate and **book a test**.

- * In Nova Scotia, you're considered fully vaccinated 14 days after you have any of the following COVID-19 vaccines:
• 2 doses of AstraZeneca or COVISHIELD / 2 doses of Moderna / 2 doses of Pfizer
• 2 doses of a combination of COVID-19 vaccines (AstraZeneca, COVISHIELD, Moderna and Pfizer)
• 1 dose of Janssen (Johnson & Johnson)
- ** Not fully vaccinated is defined as not meeting the criteria of fully vaccinated.
• complete series of a COVID-19 vaccine authorized by the World Health Organization
